Barely Essential UNIX - From where do you start? (copy)   Score: _____

1.   What do you understand by the term Root Directory?

(A) The **Root Directory** is the directory containing the entire disc system of a computer.

(B) The **Root Directory** is a directory for storing **Roots**.

(C) The **Root Directory** is the directory containing that portion of the disc system of a computer allocated to a specific user.

(D) The **Root Directory** of a project is the directory containing that portion of the disc system of a computer allocated to a specific project.

2.   What do you understand by the term Home Directory?

(A) The **Home Directory** is where one's notes on how to get **Home** afer an exacting days work and/or an intensive/extended adventure in the premises of a local salesman of toxic fluids.

(B) The **Home directory** is the directory which is the **Home** of all the disc provided by a computer system.

(C) A **Home Directory** is the directory containing that portion of the disc system of a computer allocated to a specific user.

(D) A **Home Directory** is the directory containing that portion of the disc system of a computer allocated to a specific user project.

(E) The **Home Directory** is a directory of the disc system of a computer accesible to all users.

3.   What would you expect to happen if you typed:

cd

(A) Your **Root Directory** of the entire disc system becomes the **Current Directory** (or **Folder** if you prefer).

(B) Your **Critical Dimensions** are displayed upon your computer screen.

(C) Your **Home Directory** becomes your **Current Directory**.

(D) An elegant, if incomprehensible, **Error Message** stumbles forth declaring distress and confusions of unspecified nature.

Most probably: **Error - 9837**

(E) The system reports the name of the directory that is currently current.

4. Having typed in the command:

cd

What would you suppose would be the consequence of typing the command:

cd Desktop

Ⓐ The **Current Directory** would be:

   ~/Desktop

Ⓑ The **Current Directory** would be:

   ~

Ⓒ The **Current Directory** would be the **Root Directory**.

5. Having typed in the commands:

cd; cd Desktop

What do you suppose the effect of typing in:

mkdir Day_1

might be?

Ⓐ The system will **m**ak**e** a **dir**ectory called **Day_1** in the users **Desktop Directory**.

Ⓑ The system will **m**ak**e** a **dir**ectory called **Day_1** in the users **Home Directory**.

Ⓒ The system will **m**ak**e** a **dir**ectory called **Day_1** in the systems **Root Directory**.

6. To start tidily looking at the initial exercises to investigate **Python** properly, you need to:

- Open a **Terminal** (I give you this one, **Ctrl-Alt-t** will do it for the machines you use today)
- Create a directory called **Day_1** in your **Desktop Directory**
- Make the **Day_1 Directory** the **Current Directory**

Construct a one line **UNIX** festival to acheive this and then .... ___DO IT!___

___EASY!!!!___

_____

_____

_____
